

- 1) Create a file and insert some text read the file line and append the line by line number. And then insert line to a file that file location takes arguments from command line.
- 2) Debug the previous script entirely and debug just while loop
- 3) Write a function to compute Fibonacci number of passed a number for a function.

[https://en.wikipedia.org/wiki/Fibonacci\\_number](https://en.wikipedia.org/wiki/Fibonacci_number) further detail about Fibonacci number.

Hint use recursive function to compute easily.
