

## Linux Training 3 Laboratory work

- 1) Search httpd (Apache web server) package in yum repositories. (if you debian based distrubution the command is apt)
- 2) Check the packages already installed
- 3) if httpd packages not installed update the packages after updating install the httpd. if it is already installed just update the system.
- 4) java-1.8.0-openjdk-devel install the package and remove the package.
- 5) enable httpd by systemd
- 6) start httpd by systemd
- 7) check status of httpd
- 8) stop httpd
- 9) disable httpd
- 10) run # touch A-b\_1 abc abccccc abf abv end end3 file\_3 file\_6 \_start1 start2 \_start4 a aaa A\_B\_1 abccc abcccccc abg abvdgd end1 file\_1 file\_4 \_start start1 \_start3 start4 aa a-b\_1 abb abcccc abd abghfs ant end2 file\_2 file\_5 start \_start2 start3 startend a\ a\ a
- 11) try regex pattern in cheat sheet to search file
